

Real Vision Imaging (RVI) is a software solution that enables you to digitize and organize key documents making them available for later retrieval including secured access over the web or even from a mobile device. RVI easily integrates with existing business applications for greater efficiency regardless of your industry or company size.

Here are **five good reasons** to check us out:

1. We are a **focused software developer**. RVI is our only product and we have been helping companies Go Paperless for nearly 30 years!
2. RVI was **built for integration** with your current environment and **for expansion** as your needs become more sophisticated. A capture system, advanced workflow, mobile apps and many other features are included in the base system.
3. You can choose from **three platforms**. RVI is available for your **IBM i** and **Windows** servers or even as a **Cloud** solution.
4. RVI offers **cost-effective pricing that is easy to understand**. Subscription and cloud options are available and future upgrades are included with RVI support.
5. RVI provides the **installation & training skills** to bring it all together and your support comes from the same technical resources who develop and implement RVI systems.

Would you like to schedule an RVI demo or test our capability to integrate with your current applications? Perhaps you just want to discuss the requirements of your paperless project with a certified document imaging specialist. **Give one of us a call:**

John Paul Roundtree, RVI Marketing Director

## RVI PRODUCT LINE:

**RVI Complete** is equipped with everything necessary for your paperless office project. For smaller scale start-up projects, **RVI Express** includes the same functionality but is restricted to ten concurrent users. It can be upgraded to RVI Complete by paying the license differential charge.

RVI provides a comprehensive and cost-effective solution that is available on **three platforms**:

- **RVI for IBM i** has been our legacy product since 1990 and includes a powerful spool file capture system for your printed output and reports.
- **RVI for Windows** offers similar capabilities when an on-premises Windows solution is required.
- **RVI Cloud** runs in two stable / replicated data centers with predictable monthly rates based on storage use.

A comparison of RVI systems is provided on the back of this document.

So whether this is your first attempt at a paperless office or your existing document imaging solution could use a serious make-over, we should definitely talk. With RVI, it's not complicated or expensive and we have the resources to help you at every step of your paperless office journey.
