

Real Vision Imaging (RVI) provides a solution that helps manage your documents more efficiently and securely regardless of your industry or company size. Here are **five good reasons** to check us out:

1. Helping companies **Go Paperless** is the only thing we do and we have been at it for over 25 years! RVI software is our sole focus.
2. RVI is **designed to integrate** with your current environment and can expand as your needs become more sophisticated. A capture system, workflow, mobile apps and many additional features are all included in the base system.
3. You can choose from **three platforms**. RVI is available for your **IBM i** and **Windows** servers or even as a **Cloud** solution.
4. RVI has an easy to understand **price structure that is cost effective**. Purchase, subscription and cloud options are available and future RVI upgrades are included with your support.
5. **RVI provides the expertise needed** to bring it all together and support comes from the same resources that developed the RVI software and installed your system.

Would you like to schedule an RVI demo or test our capability to integrate with your current applications? Perhaps you just want to discuss the requirements of your paperless project with a certified document imaging specialist. Give one of us a call at:

John Paul Roundtree, RVI Marketing Director

## STOP FETCHING PAPER!

### RVI PRODUCT LINE:

**RVI Complete** is equipped with everything necessary for your paperless office project. For smaller scale start-up projects, **RVI Express** includes the same functionality but is restricted to ten concurrent users. It can be upgraded to RVI Complete by paying the license differential charge.

RVI provides a comprehensive and cost-effective solution that is available on **three platforms**:

- **RVI for IBM i** has been our legacy product since 1992 and includes a powerful spool file capture system.
- **RVI for Windows** offers similar capabilities when an on-premises Windows solution is required.
- **RVI Cloud** runs in two stable / replicated data centers with predictable monthly rates based on storage use.

A detailed comparison of these RVI systems is provided on the back of this document.

So whether this is your first attempt at a paperless office or your existing solution could use a make-over, we should talk. It's not complicated and we have the resources to help you at every step of your paperless office journey.

Specifications	RVI for IBM i	RVI for Windows	RVI Cloud
