Real Vision Imaging (RVI) for Windows:

RVI software is equipped with everything needed for most paperless office projects. Digitized documents can be securely accessed from the office, over the web or even from a mobile device. RVI supports the capture of scanned paper documents and imported PC files (word processing, spreadsheets, emails, audio-visual, PDF print output and more).

RVI for Windows runs natively on a PC server using a Microsoft SQL database to store index values. Documents can be archived to network storage devices or supported WORM (Write Once Read Many) appliance solutions. RVI can be installed as a stand-alone system or integrated with existing business applications for greater efficiency.

RVI offers comprehensive features to meet your advanced needs along with easy-to-understand pricing. There are no user-based fees, workstation charges or optional modules to purchase (OCR extraction is an exception). Subscription pricing and an entry level system provide cost-effective options for smaller projects faced with tighter budgets.

Two **RVI for Windows systems** are available:

- **RVI Complete** includes all product features and is licensed for unlimited users.

- **RVI Express** includes all product features but is restricted to 10 concurrent users. It can be upgraded to RVI Complete (unlimited users) by paying the license differential charge.

Existing RVI customers planning to migrate from an IBM i platform to a PC Windows environment should contact the office to discuss license transfer charges and conversion services that will be required.

Some of the key highlights of the RVI for Windows Complete solution are as follows:

- Native application for PC Windows servers
- Unlimited RVI users / no add-on modules
- Expandable to multiple applications / departments
- 99 unique indexes per application / department
- Annual support (15%) includes future RVI releases
- Capture system included (optional OCR extraction)
- Microsoft integration (Send-To-RVI plug-in)
- PC file imports (virtual print driver / drag & drop)
- Flexible storage / retention / purge options
- Security controls / detailed audits
- Advanced workflow / approval system included
- eSignature support (signature pads / mobile devices)
- Multiple user interface / delivery options
- Integration - program calls / screen scrape utility
- Web enabled for remote / workbasket access
- Mobile apps for Apple / Android devices

With RVI, it's never complicated or expensive and we provide the installation & training resources to bring it all together for your paperless office project. Call one of our certified document imaging specialists to discuss your requirements or to schedule an RVI demo:

Questions & Answers about RVI for Windows:

1. Is the RVI for Windows system the same as RVI for IBM i?
They are functionally similar but not identical. Both are native applications for on-premises servers so they do use different operating systems and databases. The Windows solution was developed in PHP while the IBM i solution is an RPG application. RVI for IBM i has been around for nearly 30 years so it is more robust with a comprehensive spool file system and extensive workflow / integration capabilities.

2. What is the user interface for RVI for Windows?
RVI OneLook is the common end user interface across all three of the RVI systems (IBM i / Windows / Cloud). OneLook offers simplicity, functionality, and fast performance for the user. It is a browser interface so there is no code to download on workstations. And it provides a consistent experience across all RVI platforms so future IT plans involving a server change will have a minimal impact on the end users.

3. Can RVI for Windows system be interfaced with our core applications?
Yes. RVI can be implemented as a stand-alone system or interfaced with your key software applications. A screen-scrape interface utility is included with RVI for Windows as well as program calls. As there are always variations, we recommend testing in advance to determine the best interface approach to use.

4. Does RVI for Windows support more than just scanned documents?
Yes. A capture system is included in the base product to scan paper documents and import PC files. There is a Microsoft plug-in to add a Send-To-RVI button to the task bar of your Microsoft Office / Outlook applications. A virtual print driver is available for non-Microsoft PC applications and a wide variety of digital files can also be imported using the RVI Drag & Drop feature.

5. Does RVI for Windows include workflow capabilities?
Yes. Advanced workflow is included which enables you to automate work distribution (workbaskets, routing, rules), to approve work items (various user actions) and to obtain detailed audit / count information.

6. What hardware will I need with RVI for Windows?
The primary considerations are for capture and storage. Scanner devices are used to digitize paper documents and a PC workstation is recommended for production capture. A Windows server is required to run the RVI software equipped with an SQL database to store RVI index data. Storage capacity needs are dependent on workload projections and backup procedures. RVI is not a hardware reseller and does not provide specific recommendations for hardware devices or network infrastructure (these are customer responsibilities).

7. Can I transfer my existing RVI for IBM license to RVI for Windows?
Yes. Current IBM i customers with an active RVI support agreement can transfer their RVI Express / Complete licenses to Windows. A 40% loyalty discount is extended towards the purchase price of an RVI for Windows license (annual support is unchanged). Conversion services are required from RVI (call our office for a quote).

8. What RVI for Windows systems are available?
RVI for Windows is available as a Complete or Express system. Both are functionally equivalent and include all product capabilities. RVI Complete is authorized for unlimited users while Express has a ten concurrent user restriction. RVI Express can be upgraded to Complete for the license differential charge and an adjustment to the annual support fee. Both systems are available for purchase (one-time charge) or on a subscription plan (monthly charges which includes RVI support).

9. What RVI technical resources are available for support?
RVI provides 100% of the technical product support for our software (RVI Purchase Agreement terms). RVI also offers professional installation & training services for your paperless projects. The specific tasks required (along with the services price quote) would be documented in a Scope of Work prepared for your project.
