

REAL VISION IMAGING

Capture Documents / Automate Workflows

Real Vision Imaging (RVI) Cloud:

RVI Cloud is a hosted document imaging system for those interested in a non-premises option. Digitized documents are stored in one of the most physically secured sites in the nation and then backed-up/replicated to a similar site for additional protection. Users have secured 24x7 access to just your company data and only those documents they are authorized to retrieve.

RVI Cloud is equipped with nearly everything needed to digitize documents and automate workflows. A capture system is provided to scan paper documents and import PC files (word processing, spreadsheets, emails, audio-visual data, and much more). Your subscription also includes an advanced workflow/approval system, integration tools, security controls, and detailed audit logs with customized dashboards. Your documents are delivered as PDFs in the browser-based OneLook user-interface which is common across all RVI systems.

In addition to the five levels of security controls of the base product, RVI Cloud also provides an extra layer of security protection (Company Code). The host provider uses data encryption when delivering documents from their servers.

RVI provides installation and training resources to bring it all together whether your project is simple or complex.

With RVI, it's never complicated or expensive.

To discuss your project requirements or schedule an RVI demo, please contact:

rvoffice@realvisionsoftware.com or 318-449-4579

Here's what you get with **RVI Cloud:**

- Hosted document imaging solution
- Physically secured Tier III data center
- Back-up/replication to co-location site
- OneLook user interface (browser-based)
- RVI capture system is included
- Supports scanned paper / imported files
- Signature capture is also supported
- Workflow/Approval system is included
- Integration tools provided in base product
- Security controls (by specific user or group)
- Detailed audits with customized dashboards
- Capacity-based pricing (100 GB increments)
- Up to 65 RVI systems (applications) permitted
- Up to 99 unique indexes per system (application)
- Authorized for unlimited number of users
- Monthly subscription plan includes support
- Installation and training services provided

REAL VISION IMAGING

Capture Documents / Automate Workflows

What are some **Advantages of Cloud?**

A hosted cloud solution enables you to quickly and easily adopt a solution to store your very important documents in a safe and secure environment for a reasonable and predictable price that someone else will support for you. It's really that simple! Here are **several other advantages** a hosted solution offers over on-premises approaches:

- Minimal up-front costs (infrastructure is in-place)
- Predictable expense (subscription vs purchase)
- Scalable capacity (host provider handles growth)
- Quicker deployment (pre-requisites are in-place)
- Reduced IT maintenance for support & upgrades
- Higher security/compliance standards (audited)
- Stronger Backup & High Availability protection
- Lower operating expenses (energy & facilities)
- Easy access (anytime, anyplace, any device)

Combining the cost-effectiveness of the cloud with the efficiency of a document management solution is a very intriguing proposition for many customers.

About the Host Provider:

CMA Technology Solutions (Baton Rouge, LA) is the host provider selected by RVI for our cloud solution. The CMA primary data center, located in Shreveport, is the only Tier III facility in Louisiana. Cloud data is replicated to a similar co-location site in Phoenix, AZ. The CMA website is www.cmaontheweb.com.

RVI Installation & Training Services:

RVI will provide the professional services needed for your project. A certified RVI installer will review your specific requirements and document a Statement of Work (SOW) to finalize what tasks will be delivered along with pricing for those services. RVI services are typically performed remotely and usually require two weeks or less.

RVI Cloud - Subscription Pricing:

RVI Cloud uses a pay-as-you-grow pricing plan. Monthly subscription charges are based on capacity usage starting at 100 GB with additional storage tiers available in 100 GB increments. There are no user-based charges, no scanner fees, and no optional modules to purchase. The monthly subscription plan authorizes unlimited users and includes RVI technical support.

RVI Cloud pricing starts at \$800 monthly for the initial tier of 100 GB of storage and increases \$100 monthly for each incremental 100 GB tier required. Some examples are:

Total Capacity	Monthly Subscription	
100 GB	\$800	Initial 100 GB tier
200 GB	\$900	+ one increment
500 GB	\$1,200	+ four increments

Estimating Your Capacity Requirements:

How many documents does 100 GB of storage represent? That will vary based on document type (standard pages, photos, digital documents) and what resolution you plan to capture your documents.

Using 40K per scanned page as a conservative estimate would result in 2.5 million pages per 100 GB of storage. This assumption can be modified to your specific situation to obtain a capacity estimate for your workload.

RVI OneLook - Demo:

The OneLook user interface is browser-based so there is no workstation code to download. Images are displayed as PDF's in the Adobe plug-in for your preferred browser. And OneLook was developed using Sencha so it is fast and responsive. For a **video preview** of OneLook, please visit www.realvisionsoftware.com and click the camera icon in the lower right corner. Or to **schedule an RVI demo**, just click the button in the upper right of our home page.
