

REAL VISION IMAGING

Capture Documents / Automate Workflows

Real Vision Imaging (RVI) for IBM i:

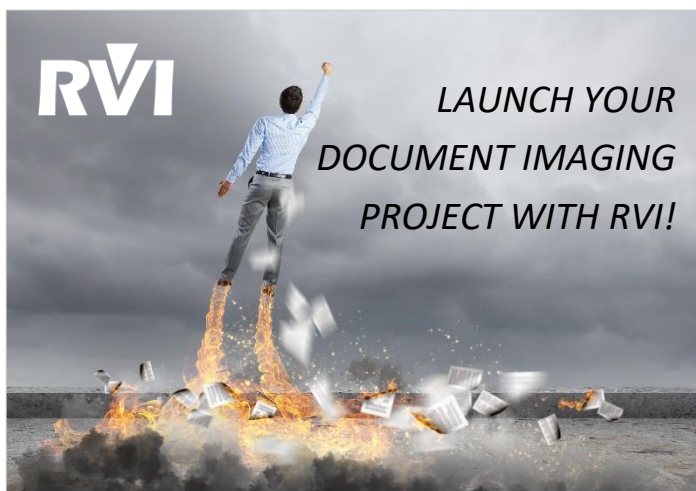

RVI software is equipped with nearly everything needed to digitize documents and automate workflows. Secured access to documents is now just one click away from the office, over the web or even from a mobile device.

RVI is available as a native application for both IBM i and Windows servers (or as a hosted cloud solution). RVI can be installed as a stand-alone inquiry system or integrated with existing business applications for greater efficiency.

With RVI, you pay just ONE price just ONE time. There are no user-based charges, no scanning fees, and no optional modules to purchase. The base product includes a capture system, advanced workflow, integration tools, security controls, detailed audits, customizable dashboards, and even mobile apps

Real Vision Software owns, develops, installs, and supports the RVI solutions. Our installers will take your project from basic concept to production whether the requirements are simple or complex. RVI annual support is 20% (or less) and includes future releases.

With RVI, it's never complicated or expensive.

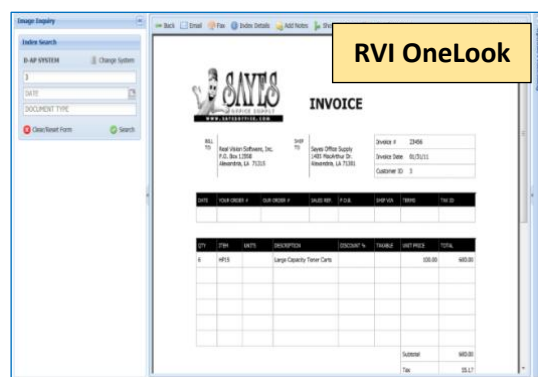

Here's the **RVI for IBM i systems:**

RVI for IBM i is our legacy product designed exclusively for the IBM AS/400 which has been available since 1990. It runs natively on your IBM i and can be implemented as a stand-alone system (electronic file cabinet) or interfaced with modernized, green-screen, web, or PC applications.

Three RVI system options are available for the IBM i:

- **RVI for IBM i Complete** includes all product features and is authorized for unlimited users. A full-function spool file system is included with RVI for IBM i.
- **RVI for IBM i Express** is the perfect choice for smaller start-up projects. The base system includes all the same product features as RVI Complete for up to ten concurrent users. RVI Express easily upgrades to RVI Complete (for unlimited users) by paying the license differential charge.
- **RVI for IBM i Spool File** is a comprehensive system for capturing just your spool print output and report data and is authorized for unlimited users. RVI Spool File is available separately and can be later upgraded to RVI Complete by paying the license differential fee.

RVI OneLook is the common user interface across all our systems. The intuitive look & feel makes it simple for your users to learn. OneLook is browser-based so there is no workstation code to download. Images are displayed as PDFs in the Adobe plug-in of your preferred browser. It was developed using Sencha which is fast and responsive.

REAL VISION IMAGING

Capture Documents / Automate Workflows

Here's what you get with **RVI for IBM i:**

The Basics:

- Native IBM i application with indexes stored in DB2
- Storage can be IBM i IFS or Network Storage Devices
- Up to 65 RVI systems (applications) are permitted
- Up to 99 unique indexes per system (application)
- Base system includes capture, integration, workflow
- RVI Windows/Cloud migration options available

RVI Capture:

- Comprehensive capture system is included
- Supports scanned paper, imported files, print output
- Send-To-RVI plug-in for Microsoft Outlook/Office
- Drag & Drop and Virtual Print for PC file imports
- Recognition/Extraction/AI options for auto-indexing
- Auto-polling of inbound emails and portal directories
- Signature capture for tablets, pads, or mobile devices
- IBM i spool file system for print output and reports

RVI Integration:

- Program calls, screen-scrape, or web services options
- Interfaces with green screen or modernized apps
- Remote access over-the-web or from mobile apps
- Stand-alone inquiry (electronic file cabinet) option

RVI Advanced Workflow:

- Routing - workbaskets, profiles, rules, priorities
- Pop-A-Queues for shared work-in-process items
- Approvals - reasons, callbacks, notifications, packages
- Details - audits, counts, ages, charts, graphs

RVI Security Controls:

- Security can be defined for specific users or groups
- Also for RVI systems, indexes, doc types, or user options
- Detailed Audits & Dashboards in log/graphical formats

RVI User Interface:

- RVI OneLook is the primary user interface
- Simple design for the best end user experience
- Consistent look & feel across all RVI systems
- Browser-based (no workstation code to download)
- Images displayed in PDF plug-in for your browser
- Subfile display options - Grid, Tree, or Tabbed views
- Grid to Excel and Quick View options from Subfile
- Side bar buttons with securable user permissions
- Advanced searches, Temporary Grids, much more
- Append, Attach, Staple, Combine options available
- OneLook was developed in Sencha (fast & responsive)

RVI Services:

- RVI owns, develops, installs, and supports our software
- RVI resources will provide the implementation services
- Most projects are completed in two weeks or less
- RVI services are typically performed remotely
- RVI technical support hours are 8-5 CST (Mon to Fri)

RVI Pricing:

- With RVI, you pay ONE price and you pay ONE time
- No user-based, per item, or optional module charges
- RVI Complete is authorized for unlimited users
- RVI Express has a ten concurrent user restriction
- RVI Spool File is authorized for unlimited users
- RVI Express/Spool are easily upgraded to Complete
- Annual support is 20% (or less) and includes new releases
