

REAL VISION IMAGING

Capture/Distribute IBM i Reports & Print Output

Real Vision Imaging (RVI) for IBM i Spool File:

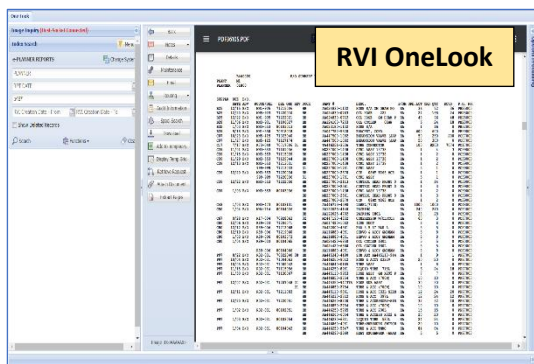

RVI Spool File is a native IBM i solution for the capture and distribution of reports and print output. All the necessary functions are provided to capture, manage, store, deliver, and preserve your reports, statements, listings, and other important IBM i spool & print output.

RVI provides **immediate and secured access** to your IBM i generated output. Authorized users can view, print, email, and download documents. The base product offers robust searching, electronic distribution, PDF delivery, merging with forms overlays, hot-spots & branching links, and even the ability to export report data to Excel spreadsheets.

RVI Spool File leverages the best of two worlds. The IBM i server provides a powerful, reliable, scalable, and secure environment to archive your spool data. And the simple look and feel of the **RVI OneLook** interface makes it very easy for the users to learn.

RVI OneLook is browser-based so there is no workstation code to download. Documents are displayed as PDFs in the Adobe plug-in of your preferred browser. RVI is also web-enabled and includes mobile apps at no additional charge to **further extend 24x7 access** by remote users.

An RVI installer will take your project from basic concept to production in a matter of days. **With RVI, it's never complicated or expensive.**

About **RVI for IBM i Spool File**:

RVI for IBM i Spool File is one of our legacy products designed exclusively for the IBM AS/400 and has been available since 1990. It can be implemented as a stand-alone system (electronic file cabinet) or interfaced with modernized, green-screen, or web applications.

With RVI, you pay just ONE price ONE time for unlimited users. There are NO optional modules to purchase. In addition to a comprehensive spool file capture system, RVI is equipped with integration tools, security controls, detailed audits, and customizable dashboards. Annual support is just 20% and includes future releases.

RVI Spool File easily and cost-effectively upgrades to the full-featured RVI Complete imaging system by paying the license differential fee. RVI Complete adds the capability to scan documents, import PC files, automate workflows, and much more. OneLook is the common user interface across all RVI systems making it a simple transition for users when you are ready to take it to the next level.
